

## BridgeSecure™ B300X Automated Alarm Central

### BridgeSecure™ At-a-Glance

BridgeSecure replaces the traditional alarm company's monitoring services. BridgeSecure sends an automated voice phone call, SMS and e-mail to your selected contacts when your alarm system detects an event. Alerts are sent sequentially to insure best possible response from your contacts and emergency services.

**Take control of your  
security system – without  
monthly fees**

### Connection is simple

The alarm panel phone line clicks into the BridgeSecure alarm port and a network cable to your home internet router completes the job. Done!

### Configuration is easy

BridgeSecure configuration pages are accessible from your home network using a computer, tablet or cellphone. Type [bridgesecure/](http://bridgesecure/) in the address bar or use the device finder on our website at [bridgesecure.com/finder](http://bridgesecure.com/finder)

To allow automated voice calls, enter your VoIP account information or use an IP phone line.

### Enjoy peace of mind

Thanks to BridgeSecure self-checked firmware updates, you will always benefit from the latest features and improvements.

## 1 – Connect (just click the cables)

## 2 – Configure your own Personal Security Network

Use the BridgeSecure configuration pages to list the contacts to alert for each type of alarm that you want them to receive.

The screenshot shows the configuration interface for BridgeSecure. At the top, there are three sections for different alarm types: 'Call Police Button', 'Medical Emergency Button', and 'Fire Alarm'. Each section has a dropdown menu for contact selection, showing 'Emergency > Contact 01 > Contact 02'. Below these is a note: '(Choose call order for Medical and Fire alarms)'. There is a 'Help' link with a dropdown arrow. The main section is titled 'Contact 01 (Owner)' and contains a form for adding a contact. The form includes a 'Contact Name' field, a 'Phone Number' field, an 'E-mail Address' field, a 'Cellphone Number' field, and a 'Select Cellular Operator' dropdown. To the right of these fields are five checkboxes for selecting notification methods: Phone, Email, SMS, Home, and Alarm. A red warning message at the bottom states: 'The home phone number is not recommended (enter the cell phone number instead)'. There are also icons for a house, a hand, and a warning sign.

## 3 – Enjoy your new peace of mind!
